

Device: vMix (V2)

Introduction

The Device Core vMix V2.0 is a newly developed Device Core for vMix control which will ultimate replace our old vMix Device Core which required the vMix Bridge application to be installed.

The Device Core has been developed on vMix version 23.0.0.54.

The Device Core is currently being developed so not all actions from the actions list will work.

Below is an overview of the Actions from the action list working currently.
