

Device: Barco ImagePRO-II

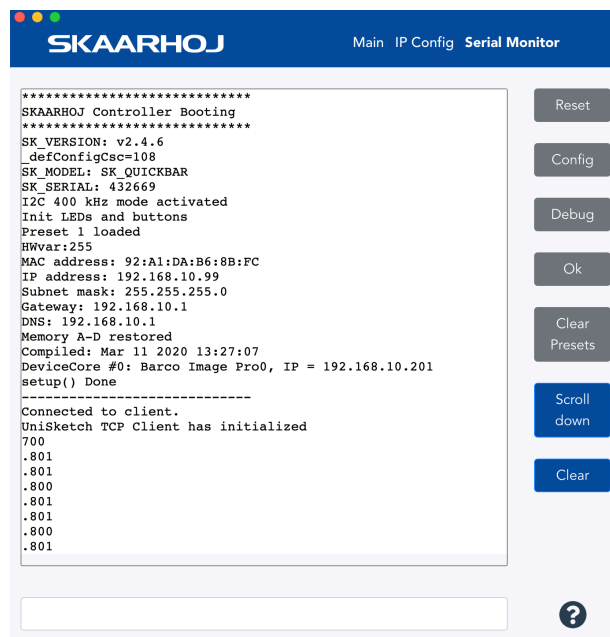

Introduction

The Barco ImagePRO-II is an advanced high-performance all-in-one video scaler, scan converter, switcher, and transcoder which can be remotely controlled by a SKAARHOJ control panel. The complete feature set is not implemented but a few practical actions can be found. This document gives you an overview of possible control parameters.

The implementation have been done on a Barco ImagePRO-II with Software Version 03.61.01.

Connection

When a SKAARHOJ device have successfully connected to the Barco ImagePRO II the serial monitor will report:

This is a overview of the actions implemented in the Device Core
